Sample MCQ

Which of the following best describes the function of the sinoatrial (SA) node?

- A) It initiates the electrical impulse that causes the heart to contract.
- B) It delays the conduction of electrical signals to allow ventricular filling.
- C) It acts as a pacemaker for the ventricles.
- D) It regulates blood flow through the coronary arteries.

Answer: A) It initiates the electrical impulse that causes the heart to contract.

Explanation: The SA node is known as the natural pacemaker of the heart, responsible for setting the rhythm by generating electrical impulses.

Sample Short Answer

Describe the pathway of blood flow through the heart, including all major chambers and vessels.

Sample Response: Blood enters the right atrium via the superior and inferior vena cavae, flows into

the right ventricle through the tricuspid valve, and is pumped into the pulmonary arteries toward the lungs. Oxygenated blood returns to the left atrium via the pulmonary veins, moves into the left ventricle through the mitral valve, and is then pumped into the aorta to supply the body.
