Question What are the main layers of the Earth's interior and their characteristics? The main layers are the crust (solid outer layer), mantle (semi-solid, convecting layer), outer core (liquid metal responsible for Earth's magnetic field), and inner core (solid metal). **Answer** How does the greenhouse effect influence Earth's climate? The greenhouse effect traps heat in Earth's atmosphere through greenhouse gases like CO₂ and methane, maintaining a habitable temperature but contributing to global warming when intensified by human activities. What evidence supports the theory of plate tectonics? Evidence includes the fit of continental coastlines, matching fossil records across continents, earthquake and volcano distribution along plate boundaries, and seafloor spreading observed via magnetic striping. What are the different types of fossil evidence and what do they tell us? Types include body fossils (preserved remains), trace fossils (footprints, burrows), and mineralized remains. They reveal information about ancient organisms, behaviors, and environments. How do solar and lunar eclipses occur? Solar eclipses happen when the Moon passes between the Earth and the Sun, blocking sunlight. Lunar eclipses occur when the Earth casts a shadow on the Moon during a full moon. What is the significance of the Earth's tilt and orbit in creating seasons? Earth's 23.5° tilt and its orbit around the Sun cause variations in sunlight received at different times of the year, resulting in seasonal changes. How do scientists use telescopes to study objects in space? Scientists use optical, radio, and space telescopes to observe distant celestial objects, analyze their light spectra, and gather data about their composition, motion, and distance. What role do convection currents play in Earth's tectonic activity? Convection currents in the mantle cause the movement of tectonic plates, leading to earthquakes, volcanic activity, and the formation of mountain ranges. What are the primary methods used to measure the age of Earth and fossils?
