Sample Managerial Economics Practice Questions

Multiple Choice Question 1

What does the elasticity of demand measure?

- a) The responsiveness of quantity demanded to changes in consumer income
- b) The responsiveness of quantity demanded to changes in price
- c) The responsiveness of supply to price changes
- d) The total revenue generated by a product

Answer: b) The responsiveness of quantity demanded to changes in price

Numerical Problem 1

If the price of a product increases from \$10 to \$12 and the quantity demanded decreases from 100 units to 80 units, calculate the price elasticity of demand.

Solution:

Elasticity = (% Change in Quantity Demanded) / (% Change in Price)

% Change in Quantity Demanded = $[(80 - 100) / 100] 100 = -20\%$

% Change in Price = $[(12 - 10) / 10] 100 = 20\%$

Elasticity = $-20\% / 20\% = -1$

Interpretation: Demand is unit elastic.
