Techniques include:

- Inhaling slowly through the nose for a count of four.
- Holding the breath for a count of four.
- Exhaling slowly through the mouth for a count of four.

3. Observe

This step involves paying attention to your thoughts, feelings, and physical sensations without judgment. Recognizing the signs of anger early allows for better regulation.

Questions to consider:

- What am I feeling right now?
- Where do I notice tension or heat in my body?
- What thoughts are running through my mind?

4. Proceed

After pausing to observe and calm, you can choose how to respond constructively. This might include communicating assertively, taking a break, or employing other coping strategies.

What is the STOP Method?

The STOP method is a cognitive-behavioral technique designed to interrupt the automatic, often impulsive, reactions associated with anger. Its core premise is simple yet powerful: when you notice yourself becoming angry, pause and employ a structured mental process to de-escalate the emotion before acting on it. The acronym STOP stands for:

- S: Stop ? Halt whatever you are doing or thinking.
- T: Take a deep breath ? Engage in mindful breathing to calm your physiological response.
